

Take a fresh look at

Sandringham²¹

Britain's most popular bathroom

*Armitage
Shanks*

Quality bathrooms since 1817

With over **10 million** pieces sold, Britain and Ireland's best selling bathroom just got better.

Next generation Sandringham21
has contemporary new looks, water
saving designs and will complement
any style of bathroom.

Sandringham21's extensive range of
residential and commercial products
features the quality, simplicity and reliability
you expect from Armitage Shanks. When
combined with local UK and Ireland based
support teams, choosing Sandringham21
will certainly put you on the map.

Quality you can stake your reputation on

**Made in Great Britain at factories independently
assessed by the Ceramic Industry Certification Scheme.**

Sandringham21 production facilities are regularly checked
to ensure they comply with the quality standards outlined
in ISO 9001. Only the best raw materials are used, such
as vitreous china that conforms to BS 3402 for high grade
ceramics, or the copper and zinc alloy in our UK Water
Regulations compliant brassware.

**Armitage Shanks employ the latest technology and
skilled British craftspeople to make Sandringham21.**

Machines can only do so much. To deliver the best
performing, most reliable and highest quality product, the
human touch is needed. Our production teams have honed
their skills to an unrivalled level over many years. We've been
doing this for almost two centuries, we know ceramics.

Putting more **eco** into **economy**

Populations grow, the amount of
water available doesn't. Wasting it
costs the planet and the wallet of
every home owner.

Saving water is no longer just a nice
idea, it's become an essential way to
save money and limited resources.
Our British design and engineering
team worked hard to make sure
Sandringham21 delivers better
performance and uses less water than
any other bathroom suite at this level.

**Saving water in the bathroom
doesn't have to mean changing the
way you do things, it just means
you need Sandringham21.**

Almost every Sandringham21 product
is designed to use water as efficiently
as possible. Many of its taps and mixers
have water regulators that prevent
water being wasted. WC cisterns have
a dual flush and the baths have a
specific shape designed to save water.

Building on a heritage you can trust

Back in 1966 Armitage Shanks put 149 years of sanitaryware manufacturing experience into the first generation of Sandringham. Forty-six years later we've used all we've learnt since to create Sandringham21.

Sandringham quickly became the most successful bathroom suite on the market, a position it retains to this day. Throughout its life quality, simplicity and reliability have remained constant. Sandringham21 retains those attributes and adds fresh new designs and water saving features to an extended range of sanitaryware, brassware and baths.

While a lot about Sandringham has changed, Sandringham21 is still manufactured in Great Britain, just like its predecessors. The same factory in the Staffordshire village of Armitage that produced the first Sandringham suite is producing the latest version too. Today, our experienced workforce use state of the art production facilities, but their ceramic skills remain the most vital part of the Armitage Shanks production process.

Almost 200 years of ceramic heritage has gone into Sandringham21. Manufactured in Great Britain, in our own factory, by skilled craftspeople who take pride in Armitage Shanks's reputation.

Reassurance for the Home Owner

- New attractive contemporary styling.
- Great design at a great price.
- A British brand you know and trust.
- Local based support for peace of mind.

Less Hassle for the Installer

- Easy installation with industry specifications and standards.
- Readily available throughout the country.
- Extensive range for residential and commercial projects.
- Locally based parts and support service.

Sandringham**21**

A co-ordinated range designed to work together

Sandringham21 is the total package. With over 70 items in the range it's a comprehensive sanitaryware, brassware and bathing solution for residential and commercial bathrooms.

New Sandringham21 has a fresh, timeless style that adapts to almost any bathroom décor, traditional or modern. But Sandringham21 is more than just a great looking suite, it's also the best way to create a bathroom simply and economically. That's because every component has been designed by us to work together perfectly. And, because we manufacture every item ourselves, our quality control team can make sure that all products are within precise tolerances, guaranteeing a perfect fit every time.

Installing Sandringham21 is also easier because it's made in Britain, by a British company, specifically for the British market. This means standard UK fittings will work with it, taps and mixers are designed to work at UK water pressures and it meets all applicable UK Water Regulations.

Most suites have a limited range of options, which makes fitting out a bathroom difficult. That's not a problem for new Sandringham21, with products to suit every shape and size of bathroom:

Sandringham21's total solution

- 7 basin types, all with different taphole configurations
- 4 WC bowls
- 7 WC cisterns with different flushing options
- 3 WC seats
- 8 acrylic baths
- 7 steel baths
- 30 taps & mixers
- Urinal

Water efficiency

Using water wisely reduces utility bills and protects natural resources. Many Sandringham21 products have water saving features designed into them, helping commercial and residential buildings optimise their use of water.

Meeting the Regulations

Part G Compliance

Any new dwelling built after April 2010 must comply with Part G, a section of the Building Regulations which defines a water efficiency standard. This applies to all new buildings and any building converted into a dwelling. Part G requires that sanitary fittings do not consume more than 125 litres per person per day, as determined by the Water Efficiency Calculator. A water efficient Sandringham21 suite comprising basin and mixer, WC, bath and a shower regulated to 7 litres/minute will consume only 99 litres per person per day, well within Part G's limit.

Further information on Part G can be found in our guide **"Part G Solutions: what works and why"**.

The Code for Sustainable Homes

Working alongside Part G, the Code for Sustainable Homes (CfSH) is a measurement of the environmental performance of social housing. Currently the performance standard for a mandatory Level 3 rating requires a maximum sanitary fitting consumption of 105 litres per person per day.

A water efficient Sandringham21 suite and regulated shower, consuming only 99 litres per person per day in total, will achieve a superior Level 4 CfSH rating.

Part G's Water Efficiency Calculator is used to determine the consumption of sanitary fittings in both Part G and the Code for Sustainable Homes.

Dual Flush WC's

Every Sandringham21 close-coupled, wall hung or back-to-wall WC can be effectively flushed with a 4/2.6 litre (full flush/small flush) dual flush cistern. This represents a saving of up to 52% over WC's using a single flush 6 litre cistern.

Delayed Fill WC's

The Sandringham21 low flush (4/2.6 litre) WC has a delayed fill cistern for even better water economy. The cistern only starts to refill once the flush is complete and it's totally empty, this eliminates the wasteful topping up of cistern water that can occur during the flush cycle of many standard cisterns.

Water Saving Taps & Mixers

Sandringham21 eco taps and mixers are fitted with flow regulators. By limiting the flow rate of pillar taps to 4 litres/minute and dual control mixers to 5 litres/minute, Sandringham21 brassware ensures only the amount of water necessary for washing or bathing is delivered.

Many Sandringham SL single lever mixers have the Armitage Shanks CLICK cartridge fitted. When the user reaches 50% of the mixers maximum flow they will feel a slight resistance. They can then decide to keep the flow at this economical setting, or continue to lift the lever towards the maximum flow rate.

Water Saving Bath

A typical bath can hold 180 litres of water, the Sandringham21 water saving bath is a full size bath that uses 22% less water. A specially shaped interior allows the bath to be filled with a maximum 139 litres, a full 41 litres less than an average 1700mm x 700mm bath. The lower water capacity has a minimal effect on bathing but saves significant amounts of hot and cold water.

A lowered overflow has been applied to the Sandringham21 water saving steel bath. This full size bath has a 130 litre maximum water capacity, a potential water saving of 28% over a typical steel bath.

Residential bathroom collection

The simple new lines of Sandringham21 are at home in any style of bathroom, from traditional to modern and everything in between. Not only will it improve the looks of a bathroom, its clever British design means it will save water (and money) too.

Guarantee

Lifetime

All ceramic products.

25 years

On acrylic baths.

5 years

On steel baths, bath panels, taps and mixers, toilet seats and cistern fittings.

Our confidence in the quality and reliability of Ideal Standard products enables us to guarantee many of them for a lifetime.

Our guarantee is offered on all products that have been used in the manner for which they were intended, and does not apply to any products that have been misused or abused in any way. Products must be installed and cared for in line with our fixing instructions and local water bye-laws. In the unlikely event the product fails within the guarantee period, we offer a free replacement or replacement part (or nearest equivalent). Liability is limited to individual products and does not cover consequential loss or damage on installation.

1. All ceramic products are guaranteed for a lifetime.
2. Idealcast and Idealform acrylic baths are guaranteed for twenty-five years from date of purchase.
3. Showers, bath panels, mixers and taps, WC suite seats and cistern fittings are guaranteed for five years from date of purchase (cistern and shower door seals are not included. Replacements can be found on our Fastpart website www.fastpart-spares.co.uk)
4. Shower enclosures, wetroom panels and bath screens are guaranteed for ten years and shower trays for twenty-five years.
5. Parts (including push button flush valves) are guaranteed for five years and will be replaced if found to be faulty.
6. Cistern diaphragms, seals shower seals are not included. Replacements may be purchased through our parts supply service.
7. When your bathroom has been satisfactorily installed and is working well, please ensure you register your guarantee.
8. The guarantee is transferrable "it applies to the product not the purchaser" provided guarantee registration details are passed on to the new owner.

This guarantee does not affect your statutory rights. Products must be installed, used and cared for in line with our fixing instructions and local bye-laws. Parts (eg cistern diaphragms, seals and shower seals) are not included.

The guarantee does not cover general wear and tear.

Applies to UK and Republic of Ireland only.

See website for full guarantee details.

Important installation information

A key element in the performance of a bathroom is the quality of the installation. We recommend you use a plumber from a registered association and consult him (or her) right from the start. Your local Armitage Shanks stockist may offer a plumbing service or, if not, will be able to recommend a qualified plumber.

For further information on any of our products;

please call **0870 122 8822**
or visit www.thebluebook.co.uk
or download our new **Ideal Spec App**, the UK's most comprehensive bathroom specification resource.

The bluebook has long been the most comprehensive guide to bathroom and washroom products.
